

Church House
Quarterly Risk Profile
Update Note
Q2 2017

Summary

Fund	Weighted average asset allocation [^]	Latest historical asset allocation [*]	Comparable DT volatility [†]	Assigned risk profile	Status
SVS Church House Tenax Absolute Return Strategies Fund	3 (3)	2 (3)	2 (3)	3	

Our analysis indicates that the assigned risk profile remains appropriate.

This quarter, the expected volatilities of the latest asset allocations have declined marginally below the risk boundaries of the respective assigned profile, following an increase in bond exposure at the expense of equity holdings. However, due to the proximity of these allocations to the DT 3 risk profile boundaries, we remain comfortable with the suitability of the assigned profile.

We have based our review on the approach that was agreed at the start of the risk profiling service and used the DT capital market assumptions for Q2 2017. There have been no changes to the risk profile boundaries this quarter.

Process

The methodology for profiling the Fund was largely based on an understanding of how risk is managed. As the risk target does not change on a quarterly basis, we would not expect our profile to change unless we perceived that the target and/or the DT boundary were breached.

Comments and notes from previous reviews

Q4 2016 - Q1 2017

Our analysis indicates that the assigned risk profile remains appropriate.

Q2 2016

Our analysis indicates that the assigned risk profile remains appropriate.

The recent achieved volatility over 36 months is below the minimum expected volatility. However, over the long term, the Fund has been very close to the DT 2 & 3 boundary. In addition to this, the expected volatilities of the allocations remain safely within the DT 3 boundary; therefore we are comfortable with the assigned profile.

Q2 – Q4 2015

We have continued to place the profiled fund on a green status.

() Analysis based on data to the end of December 2016 are shown in brackets.

[^] The weighted average approach incorporates the strategic asset allocation (if applicable) and the distribution of the historical asset allocations.

^{*} This column provides the position of the expected volatility based on the latest historical asset allocation (i.e. March 2017). The figure in brackets illustrates the position of the volatility based on the previous quarter's allocation.

[†] DT has a set of asset allocation models which are managed to operate within each profile's boundaries. This column compares the annualised rolling volatility of each solution to the DT models and shows which model has been closest since inception. The rolling volatility period in each instance is assessed based on the performance data provided.

Please see Appendix for the Red, Amber & Green status descriptions.

Analysis of the SVS Church House Tenax Absolute Return Strategies Fund

Confidence limits

The chart above shows the percentiles associated with the volatility expected of DT 3 risk profile. We have plotted the cumulative performance (in real terms) for the Fund against the percentiles. The chart shows that the Fund returns have remained comfortably within the confidence levels expected of DT 3.

Asset allocations

The chart above illustrates the changes in asset allocations on a monthly basis for the Fund for the year to March 2017.

Appendix

Status descriptions

A **red** status indicates that the solution's current risk profile is no longer appropriate to the DT scale and that it will be changed at next quarter's review unless action is taken by the asset management team.

An **amber** status indicates that one or more of the measures considered may indicate the possibility of an alternative risk profile. This could be due to short-term tactical positioning within the solution or other market considerations, and does not imply that the long term risk profile should necessarily change.

A **green** status indicates that the solution is in line with the assigned risk profile and no action is needed.

Basis of Preparation and Use
